FRESH PRODUCE SUPPLY CHAIN ANALYTICS

Demand Forecasting · Inventory Optimization · Waste Reduction | Period: 1–30 Sep 2026 | Practice project on simulated data (not actual Fambo data)

TOTAL DEMAND	FORECAST – NEXT 7 DAYS	TOTAL WASTE	WASTE % OF DEMAND	AVERAGE FILL RATE	STOCKOUT DAYS
8,479	2,000	1,755	20.7%	100%	0
kg in 30 days	*kg expected demand*	*kg expired / written off*	*too high – main problem*	*demand fully served*	*days demand was missed*

THE 3 BUSINESS QUESTIONS – ANSWERED FROM THE DATA

1 WHAT TO ORDER?

Plan for about 2,000 kg over the next 7 days. Potato needs the most (546 kg). In each 4-day order cycle, order about 1,160 kg in total – product-wise quantities are in the scorecard below.

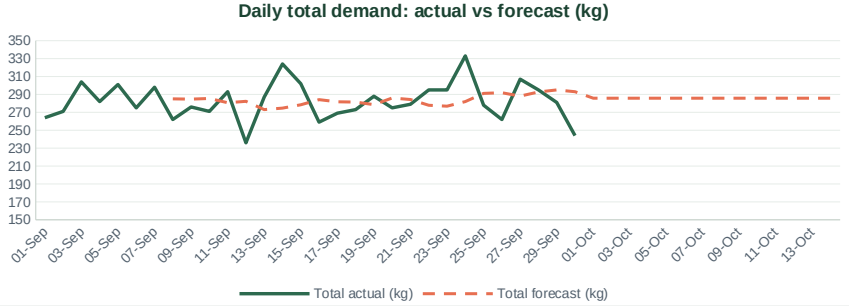

2 WHEN TO ORDER?

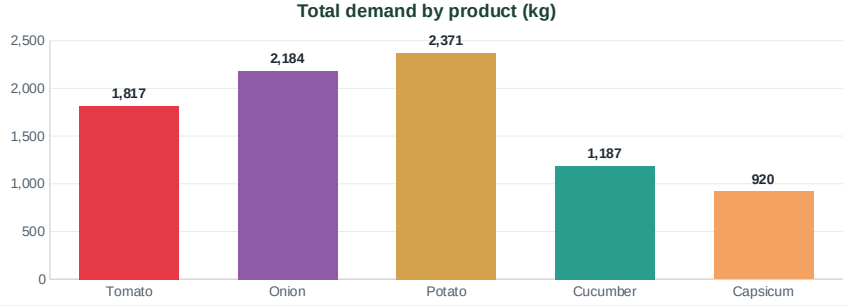

Order when stock falls to the reorder point. Right now 1 product(s) need an order and 0 are on watch. Next order is due for Capsicum right now.

3 HOW TO REDUCE WASTE?

Waste is 20.7% of demand (1,755 kg) while fill rate is 100% – so we hold too much stock. Onion loses the most. Use FEFO, order smaller batches, and cut waste by 50% to save about 878 kg.

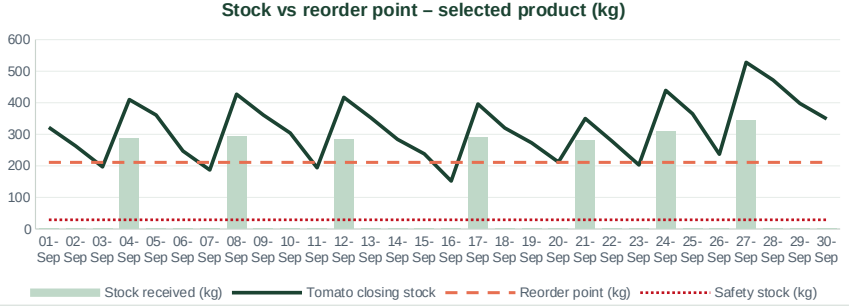

1 · DEMAND & FORECAST

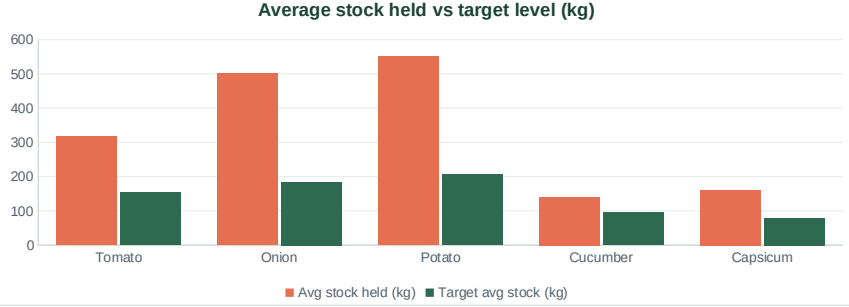

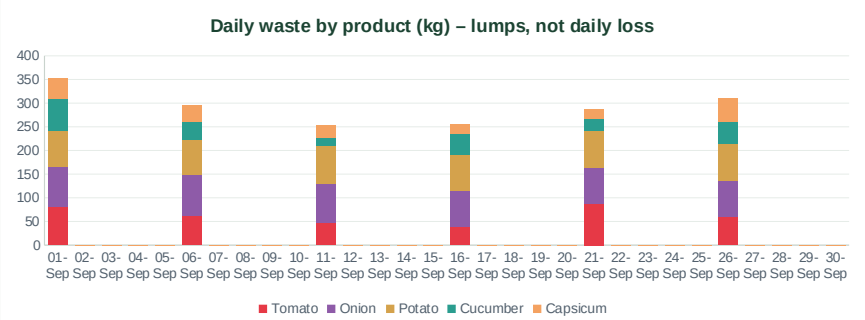

2 · INVENTORY & REORDER POINT

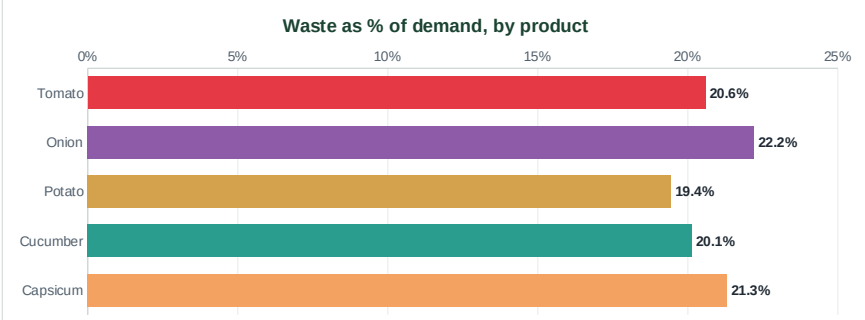

Pick a product for the stock chart Tomato *(click the yellow cell and choose from the dropdown)*

3 · WASTE & EXPIRY

PRODUCT SCORECARD

Product	Demand (kg)	Avg demand / day (kg)	Forecast next 7 days (kg)	Forecast accuracy	Reorder point (kg)	Stock now (kg)	Days of cover	Stock status	Suggested order qty (kg)	Next order date	Waste (kg)	Waste % of demand	Fill rate	Stockout days	Excess stock (kg)	Est. waste value (₹)	Avg stock held (kg)
Tomato	1,817	60.6	449	83.5%	211	349	5.8	OK	250	02-Oct	374	20.6%	100%	0	164	9,350	318
Onion	2,184	72.8	503	86.2%	325	584	8.0	OK	300	03-Oct	485	22.2%	100%	0	317	14,550	501
Potato	2,371	79.0	546	80.8%	363	745	9.4	OK	320	04-Oct	461	19.4%	100%	0	343	10,142	550
Cucumber	1,187	39.6	307	84.7%	95	129	3.3	OK	160	30-Sep	239	20.1%	100%	0	44	6,692	140
Capsicum	920	30.7	195	83.4%	106	87	2.8	ORDER NOW	130	30-Sep	196	21.3%	100%	0	82	8,820	161
